

What sets PowerBuild apart is the way all our products connect to form a complete ecosystem and Customers don't have to look for different suppliers for motors, reducers, pumps, or drive controls

Mr. R. Haridoss

CEO - Power Build Private Limited

Q-1. PowerBuild offers a very wide range of power transmission products. How would you describe the company's philosophy and approach?

Ans. At PowerBuild, our philosophy is to give industries a complete solution rather than isolated components. We have spent many years developing geared motors, gearboxes, pumps, and drive solutions that work together as a unified system. Our approach is based on reliability, consistent performance, and application understanding. Every industry has its own challenges, and our aim is to provide products that can handle tough working environments while maintaining smooth and efficient operation. This focus on practical engineering and customer needs has shaped our entire product ecosystem.

Q-2. PowerBuild's geared motors are known across many industries. Can you explain the main series that form your core product range?

Ans. Our main geared motor

series are designed to cover almost all types of industrial requirements. The M Series represents our helical inline motors, known for their compact size and efficiency, making them suitable where space is limited but performance cannot be compromised. The C Series is our heli-worm design, which provides a right-angled arrangement with smooth and quiet functioning, especially useful in places where layout constraints are a concern. The F Series covers our parallel shaft motors, widely seen in material handling setups and steel-related operations thanks to their sturdy design and ease of integration. The K Series represents our helical bevel motors, trusted by heavy-duty industries such as cement, mining, and power because of their strong build and long-term dependability. Together, these series allow us to serve a wide spectrum of applications with the right balance of strength and efficiency.

Q-3. Beyond the main products, PowerBuild also

offers specialized solutions. Can you share more about these?

Ans. Yes, apart from our core geared motor series, we offer several ranges developed for very specific industrial needs. Our PBWR range includes compact worm gear reducers that are easy to mount and ideal for simple yet reliable drive arrangements. The H Series is created specially for hoist and lifting applications in crane systems, where safety and precision play an important role. The PN Series includes our planetary gearboxes, designed for applications that demand high torque, flexibility in configuration, and smooth power transmission. We also have the A Series, which consists of compact, grease-filled geared motors suitable for lighter industrial uses and readily available through our retail partners. Then there is the J Series, a shaft-mounted reducer range known for its easy installation and suitability in industries such as ceramics, paper, and mining. Each of these series supports a unique segment of the market, helping us cater to

both general and highly specialized applications.

Q-4. Apart from geared motors and gearboxes, what other products complete PowerBuild's ecosystem?

Ans. To support industries fully, we also manufacture loose gears and pinions with high precision for customers who need customized transmission parts. Our Roloid Gear pumps are widely used for lubrication, cooling, and handling viscous fluids in demanding industrial setups. In addition to these, our PBL Variable Frequency Drives help customers control speed, torque, and energy usage more effectively. By offering these additional products, we ensure that customers receive a complete and well-integrated solution from a single, reliable source. This makes PowerBuild not just a supplier of individual items but a true power transmission partner.

Q-5. What, according to you, makes PowerBuild stand out in the industry?

Ans. What sets PowerBuild apart is the way all our products

connect to form a complete ecosystem. Customers don't have to look for different suppliers for motors, reducers, pumps, or drive controls. They get everything from one brand, backed by consistent quality, dependable service, and engineering expertise. Industries trust us because we offer long-term solutions, not temporary fixes. Our strong field support, application understanding, and commitment to continuous improvement make us a partner that customers can rely on across different stages of their growth.

Q-6. How can customers reach PowerBuild for product inquiries or technical support?

Ans. We are always open to support customers with guidance, product recommendations, or technical discussions. Anyone seeking assistance can connect with us easily through call or WhatsApp at +91 97277 19344 or visit our website at www.powerbuild.in. We believe in quick and clear communication, and our team is always ready to help.
